

Hurry Up ! Mr. Fire Engine

Go Go! しょうぼうしゃ

■Purpose of Exhibition

This is one of the "Natsukashi no Tenji (Exhibition from a Good Memory)" selected from the exhibitions of the former science and technology building which was closed on September, 2010.

The purpose of this exhibition is to show you the popular exhibitions of the old building.

■Additional Knowledge

This exhibition was one which was shown in "Prevention Of Disasters" on the second floor in the old science and technology building in the Nagoya City Science Museum. It was left as a "Natsukashi no Tenji (Exhibition from a Good Memory)" in the new building. The theme of the former Science Building, Level 2, "Prevention Of Disasters", was made in collaboration with the Nagoya City Fire Bureau.

Disaster and fire preventions have been learnt through locating dangers of fire in the home, understanding the experience of fire, and reporting to the fire station. "Go, Go! Fire Engine" is a driving simulator on which you go to a site where a fire has started. There is a switch to turn on the siren when leaving.

It is a game to learn to drive emergency vehicles while observing the speed limit, and without forgetting to turn on the siren.

Cooperation: Nagoya City Fire Bureau
